

1 year warranty on TBi robot torches

For many years, the TBi RoboMIG welding torches have been successfully utilised in highly-demanding industrial tasks. The customers benefit from an extremely robust torch, which surpasses the lifetime of conventional robot torches by a multiple. With a unique combination of the solid stainless steel outer tube with other design features, TBi was able to achieve this advantage. The TBi RoboMIG torches are especially unsusceptible towards collisions and temperature changes. Being factory adjusted in the range of hundredths of millimeters, the TCP (Tool Center Point) of the torch remains extremely constant - even after a long time of use. In contrast to competitor's products, the end user does not need any adjustment tool for the torch, TBi Industries GmbH guarantees this for 1 year!

The TBi RoboMIG series includes a choice of different torch models, holding brackets, cable assemblies, a safety-off mechanism and push-pull drives, which may be combined as needed.
