www.sonics.com

Since its inception in 1969, Sonics & Materials, Inc. has enjoyed over 3 decades of world leadership in the fields of ultrasonic welding technology and liquid processing, and more recently, ultrasonic food cutting. The company is ISO 9001 certified and is consistently in the vanguard of industry innovators. Leading the way in research and applied technology, Sonics is dedicated to providing the highest quality products and real world manufacturing solutions, backed by comprehensive technical support and applications expertise.

In South Africa, we aim to be:

- A value-added business partner to you
- Supportive in design consultation, equipment troubleshooting, application analysis and alternative options.
- Responsible and fair in servicing your needs

Ultrasonic Technologies promotes Sonics in South Africa. Metal Packaging Technologies provides all engineering and automation design and construction. This association and potentially others in the project makeup has the benefit of specialist appointment without the traditional profit loading burden upon you.

We welcome your interest

Meet the Team

You will recognize Colin Tyrrell near a machine, busy scheming or evaluating new creative ideas. That's when he is at his best. Colin, as a GCC Engineer, has over 40 years experience in the FMCG

industry. He has also served the automotive and steel industry in assembly lines and production equipment.

Colin heads the design and manufacturing facility for all process plants and new applications.

It would be most advantageous to have Colin assist you in your new ideas and production requirements.

Your communications partner is Peter Theunissen, who offers the link for creative developments. Peter has served the ultrasonics industry since 1987. Everything starts from a need and a great idea emerges, calling for action to bring it into fruition.

This creative development is an art to bring the right people and organizations together, working

synergistically to produce the concluded idea, superbly and cost-effectively, so as to add value in every instance for all involved.

Ultrasonics serves all of industry beneficially in many ways and the food industry's acknowledgement of this new cutting technology will define most new food production lines completely.
