SPATTER SHIELD PROBE GRADES

Spatter Shield has developed 3 additional Probes to deliver differing mist levels to the weld.

Due to a diverse global market in the welding industry and the differing operational environments that the application can be utilized, it was necessary to develop higher grades of mist concentration.

The Spatter Shield system consists of 2 components, a probe and a fluid dispenser. The fluid is compatible with: CO₂, Argon, Argon Based Mixtures, Helium, Hydrogen and is suitable for: Carbon Steel, Cast Iron, Silicon Bronze Welding and Hard Facing.

Spatter Shield
Black Probe
Low Mist (Level 1)

Spatter Shield
Blue Probe
Average Mist (Level 2)

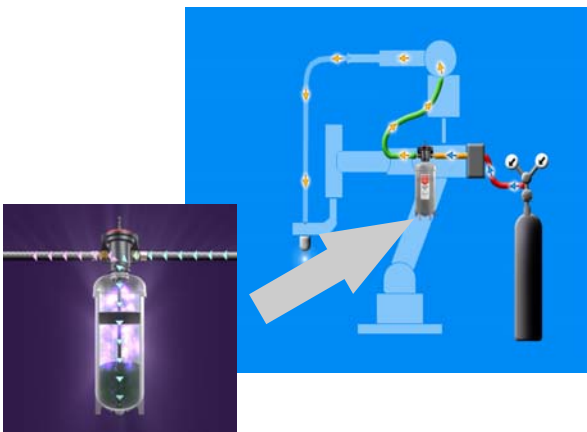

Spatter Shield
Red Probe
Heavy Mist (Level 3)

Spatter Shield
Grey Probe
Very Heavy Mist (Level 4)

For assistance in probe selection, please contact your local distributor or visit www.spattershield.com
